Native Spanish. English B2+. Duolingo English Test 125, the top of the B2 range. C1 starts at 130.

Summary

My career in systems began in 2013, as a web programmer on both the front end and the back end. I later took on project leadership and, since 2019, I have worked as a Product Owner and Scrum Master. That work does not stay in management. I go through the full flow: I gather and prioritize requirements, I put the product and the POCs together, and I also develop, test, and automate.

Today I am at ArkusNexus, since June 2022. Since August 2025 I have been assigned to Shopline, where I built most of the custom n8n nodes, I develop the flows, and I take part in the tests, the iterations, and the support. In parallel, since June 2026, I build the entire product of a SOFOM in Mexico on my own and with AI, from the design. The other accounts are in the United States.

As a Scrum Master I look after schedules, impediments, and the team's flow. As a Product Owner I align the product with the business and the client. Organization and problem-solving continue day to day, now also in the code and in the automations.

Experience

ArkusNexus (Grupo Mind) — Product Owner and Scrum Master

June 2022 – present. Tijuana, Baja California. This is the job. Shopline and the other accounts are assignments.
I agree objectives, write INVEST requirements, and coordinate the cycles. The setting includes 5 projects with a Scrum team, a core Kanban team, and a UI/UX Kanban team. Tools for that role: Jira, Confluence, Slack, Google Workspace, and Basecamp. Development and automation sit in the assignments.

Shopline — AI Enablement Engineer, assignment

August 2025 – present. Clients in the United States.

- Problem: DTC stores needed orders, inventory, fulfillment, and returns automated, and ERP, 3PL, tax, ShipBob, Passport, and Redo connected.
- Built: most of the custom n8n nodes. I develop the flows and take part in testing, iteration, and support. I also write PRDs, scope, and acceptance criteria, and QA the theme against the approved Figma design.
- Result: a documented go-live on July 13, 2026. In a logistics sandbox, a fulfillment hold cannot be forced through the API and order editing can; the finding changed the design.

SOFOM, Mexico — Freelance, in parallel

June 2026 – present. Remote. The whole product, alone and with AI, from the design.

- Problem: a SOFOM needed its credit-management product.
- Built: white-label multi-tenant SaaS. Application and API for origination, control desk, anti-money-laundering checks, credit products and catalogs, portfolio and amortization schedule, daily close, treasury with SPEI disbursements, collections, accounting entries, plus institutions, users, roles, and brand. Stack: Next.js, React, TypeScript, Tailwind CSS, Supabase, and n8n.
- Result: still in progress, with an estimated close in December 2026.

Other assignments at ArkusNexus

- USAVIONICS, November 2025. Problem: drone fleet, missions, and GPS, for a client in the United States. Built the POC. Result: the proof of concept.
- Advanta Connect, October 2025. Problem: a sales-enablement app without a product owner. Built the scope as interim product owner and white-label prototypes. Result: the prototypes.
- Notary POC, September 2025. Problem: a notary flow with AI, for a client in the United States. Built the POC with AI. Result: the proof of concept.
- Real-estate POC, August 2025. Problem: a luxury property, for a client in the United States. Built the POC. Result: the proof of concept.
- Krystal, July–August 2025. Problem: talent attraction with matching. Built the POC in React. Result: the POC.
- Facial access control, June–July 2025. Problem: access control with AI. Built the React front end and the Supabase functions. Result: the POC.

- Delivery, April–June 2025. Problem: KPIs and a Bitbucket repository that needed stabilizing. Built KPIs from Jira, GitHub, and Bitbucket, a financial dashboard, and a 4-module system. On April 30, 2025, worked the backlog, blockers, QA, and Bitbucket. Result: that stabilization work and the 4 modules.
- Mosaic, March 2024 – April 2025. Problem: getting finance data into spreadsheets and other systems. Built an export to Google Sheets, an add-on, and ETL connectors (BigQuery, Redshift, Xero, Snowflake, and Sage Intacct). Result: the export, the add-on, and those connectors.
- Drata, November 2022 – January 2024. Problem: delivery of a compliance product. Built the product-owner and scrum-master work. Result: more than 10 releases and training for more than 20 people.
- WellFit. Problem: a front end for dental clinics covering users, roles, records, and payments. Built that front end. Result: more than 500 transactions a month.
- Wellness. Problem: voice, clinical documents, and meals. Built voice, clinical OCR, and AI meal plans. Result: those three pieces.
- Voter-ID (INE) OCR. Problem: reading the voter credential. Built the product-owner work. Result: a team of 5 to 7 people.

Coru (Compara Gurú) — Product Engineer
May 2022 – June 2022. Mexico City.
Problem: financial education (credit, cards, savings, investments, retirement funds, and small business). Built user stories, prioritization, acceptance criteria, and prototypes. Result: the profile records 4 KPIs.

Finasist — Product owner, project leader, and .NET developer
August 2015 – May 2022. Mexico City.
Problem: credit systems. Built as a .NET developer (2015–2017), project leader (2017–2019), and product owner (2019–2022), with ASP.NET MVC, Bootstrap, jQuery, Ajax, SQL Server, and a test robot. Result: more than 5 systems and the test robot.

Catarsyslab / Grupo Solertia — .NET and front-end developer
August 2013 – August 2015. Mexico City.
Problem: access control, account statements, and intranets for Aramark, Broxel, and Ficrea. Built them with ASP.NET, C#, SQL, HTML, CSS, JavaScript, jQuery, and Umbraco. Result: those systems for the three clients.

Skills

Development: Next.js, React, TypeScript, Tailwind CSS, JavaScript, C#, and .NET. Data: Supabase, PostgreSQL, SQL Server, MySQL, and MongoDB. Management: Jira, Confluence, Notion, Monday.com, and Trello. AI: n8n (custom nodes and flows), Cursor, Claude, ChatGPT, and Gemini. Design: Figma.

Certifications

Agile Coach (ACPC), CertiProf, 2024. DevOps Fundamentals, PeopleCert, 2023. Scrum Product Owner (SPOPC), CertiProf, 2022. Kanban Essentials (KEPC), CertiProf, 2022. Scrum Master (SMPC), CertiProf, 2021. Design Thinking (DTPC), CertiProf, 2020. Scrum Master (SMC), SCRUMstudy, 2018. Scrum Developer (SDC), SCRUMstudy, 2017. Scrum Fundamentals (SFC), SCRUMstudy, 2017. The PMP project-management course is not the PMI certification. Courses, class videos, and the expired remote-work credential are on the website.

Education

Bachelor’s degree in Administrative Informatics. Tecnológico de Estudios Superiores de Ecatepec (TESE). August 2005 – October 2010. Professional license 6849641.
