Native Spanish. English B2+. Duolingo English Test 125, the top of the B2 range. C1 starts at 130.

Summary

AI Enablement Engineer at Shopline, inside ArkusNexus, working with clients in the United States. Product owner, product manager, and scrum master describe the work, not the headline: I set value and priorities, write requirements, and keep the team's flow. I have been in software since 2013 and in product since 2019. I now build with AI. Since June 2026, in parallel, I have been remotely freelancing the entire product for a SOFOM in Mexico, on my own.

Experience

Shopline, inside ArkusNexus — AI Enablement Engineer

August 2025 – present. Clients in the United States. Product manager in practice.

- Custom n8n nodes for DTC stores: orders, inventory, fulfillment, and returns, on top of the platform API.
- ERP, 3PL, tax, ShipBob, Passport, and Redo integrations. Requirements for international shipping with duties and taxes, multicarrier shipping, 3PL fulfillment, and payments that meet alcohol-sales compliance.
- DTC stores: theme, QA, punch list against the approved Figma design, performance, and accessibility. One documented go-live on July 13, 2026.
- Weekly status in English. I coordinate a squad of front end, back end, and design. The team builds the integrations.
- In a logistics sandbox I confirmed that a fulfillment hold cannot be forced through the API and that order editing can. The finding changed the design.
- Maintenance-retainer flow: request, triage, estimate within one business day, ticket, desktop and mobile QA, delivery, and a monthly report. Delivery tracker with Monday.com as the source.

SOFOM, Mexico — Freelance

June 2026 – present. Remote. I build the entire product alone, with AI.

- White-label, multi-tenant SaaS for credit management at an unregulated SOFOM.
- Application and API: origination, control desk, anti-money-laundering checks, credit products and catalogs, portfolio and amortization schedule, daily close, treasury with SPEI disbursements, collections, accounting entries, plus institutions, users, roles, and brand.
- Stack: Next.js, React, TypeScript, Tailwind CSS, Supabase, and n8n. Still in progress, with an estimated close in December 2026.

Proofs of concept for clients in the United States — ArkusNexus

2025

- September 2025. Notary POC with AI.
- August 2025. Luxury real-estate POC.
- November 2025. USAVIONICS: drone-fleet POC, missions and GPS.
- October 2025. Advanta Connect: interim product owner for a sales-enablement app and white-label prototypes.
- July–August 2025. Krystal: talent-attraction POC with matching, in React.
- June–July 2025. Facial access-control POC with AI. React front end and Supabase edge functions.

ArkusNexus (Grupo Mind) — Product Owner and Scrum Master

June 2022 – present. Shopline, above, is the current work inside the same company.

- I agree business objectives, plan features, write INVEST requirements, coordinate the cycles, and report each release to the client. The setting includes a program of 5 projects, each with a Scrum team, a core Kanban team, and a UI/UX Kanban team.
- Drata, November 2022 – January 2024. Product owner and scrum master on a compliance product. More than 10 releases and training for more than 20 people.

- Mosaic, March 2024 – April 2025. Finance: export to Google Sheets, an add-on, and ETL connectors (BigQuery, Redshift, Xero, Snowflake, and Sage Intacct).
- Norden, April – June 2025. KPIs from Jira, GitHub, and Bitbucket, plus a financial dashboard. In April 2025 I stabilized the delivery module: backlog, blockers, QA, and the Bitbucket repository. Also a 4-module system.
- WellFit. Front end for dental clinics: users, roles, clinical records, and payments, with more than 500 transactions a month.
- Wellness. Voice, clinical OCR, and AI meal plans.
- Voter-ID (INE) OCR. Product owner for a team of 5 to 7 people.

Coru (Compara Gurú) — Product Engineer

May 2022 – June 2022. Mexico City.

Financial-education platform (credit, cards, savings, investments, retirement funds, and small business). User stories, prioritization, acceptance criteria, and prototypes. The profile records 4 KPIs.

Finasist — Product owner, project leader, and .NET developer

August 2015 – May 2022. Mexico City.

Credit systems. .NET developer (2015–2017), project leader (2017–2019), and product owner (2019–2022). More than 5 systems and a test robot. Development-era stack: ASP.NET MVC, Bootstrap, jQuery, and SQL Server.

Catarsyslab / Grupo Solertia — .NET and front-end developer

August 2013 – August 2015.

Custom systems (access control, account statements, and intranets) for Aramark, Broxel, and Ficrea. HTML, CSS, JavaScript, jQuery, Umbraco, ASP.NET, and C#.

Skills

Product: PRDs, backlog, Scrum, Kanban, acceptance criteria, Jira, Confluence, and Monday.com.

AI and automation: n8n (custom nodes and workflows), Cursor, Claude, ChatGPT, and Gemini.

Applications: Next.js, React, TypeScript, Tailwind CSS, JavaScript, and Supabase. Data: PostgreSQL, SQL Server, MySQL, and MongoDB. Design support: Figma. Earlier stack: C# and .NET.

Certifications

Agile Coach (ACPC), CertiProf, 2024. DevOps Fundamentals, PeopleCert, 2023. Scrum Product Owner (SPOPC), CertiProf, 2022. Kanban Essentials (KEPC), CertiProf, 2022. Management 3.0, 2022. Scrum Master (SMPC), CertiProf, 2021. Design Thinking (DTPC), CertiProf, 2020. Scrum Master (SMC), SCRUMstudy, 2018. Scrum Developer (SDC), SCRUMstudy, 2017. Scrum Fundamentals (SFC), SCRUMstudy, 2017. Courses are on the website.

Education

Bachelor’s degree in Administrative Informatics. Tecnológico de Estudios Superiores de Ecatepec (TESE). August 2005 – October 2010. Professional license 6849641.
